                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        encephalopathies, neuropathies, memory loss, dementia, depression, psychosis and opportunistic infections. The populate act as antagonists of HTCO-mediate hearotyxicity and subsequent neuronal dependention. This enables therapeutic treatment of HTV infection and other inflammatory neurological diseases, including multiple sclerosis, tropical spastic paraparesis and Alzheimer's disease.
Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogeni polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by Flathes the discrete include SATH, syndrome (synchia, actor, pustulosis, hypertosis and osteomyelitis), uncitis and endophthalmitis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acces proteins. These antibodies can be used to downraymate expression and activity of P. acces polypeptides and therefore treat P. acces infections. The antibodies may also be used as diagnostic agents for determining P. acces presence for example, by enzyme linked immunoscribert assay (ELISA).

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 he series is also involved in infections of bear joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with some vulgaris. A method for detecting the presence or absence of P. acres in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention

```

probes which are derived from genomic sequences expressed in the human brain. They can be used to an asure gene expression to brain cell samples, which may eachle the diamons and improved frommost of normous system diseases such as Altheimon's disease multiple solerosis, wohizophrenia,

The present invention provides a number of single exon nucleic acid Example 4; SEQ ID NO:  $36\pm69$ ; 650pp + Sequence Listing; English WPI; 2001-483446/52

Single exem nucleic acts (dobes for analyzing gene expression in

human

The invention relates the generation of aminoctornical conversed CC chemokines, having chemokine antagonistic activity. The new chemokines are useful as medicaments, for diagnostic activity. The new chemokines are useful as medicaments, for diagnosts and/or treatment of diseases which require antagonistic activity of a chemokine e.g. inflammatory diseases, HTV infection, fundous, and analogenesis, and hematopolesis—related diseases, including auto-immune diseases, atheroscierosis,
Chemoattractant; MCP-2; h-paranase; heparin; heparan sulfate;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a chemokine receptor liquid. The present induid can be incorporated into the conjugates of the invention. The specification describes a combigate binds to a chemokine receptor rigand. The conjugate binds to a chemokine receptor resulting in internalisation of the targeted agent in cells bearing the receptor. The conjugates are used for formulating a medicament or for treating disorders associated with inflammatory responses resulting from activation, proliferation and migration of immune effector cells. The disorders or disease states comprise secondary tissue damage such as central nervous system (CMS) injury. CNS inflammatory diseases, inflammatory bowel diseases, inflammatory boint diseases, inflammatory inflammatory board diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A new therapeutic agent compulsing a conjugate for treating secondary tissue damage and other disease conditions like Alzheimer's disease stroke, Parkinson's disease and atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WFI, 2000-182542/16.

                      The invention relates to a truncated and mutated human PANTES (a CC chemokine mutant), comprising the amino sequence of 91 amino acids as given in the specification. The CC chemokine mutant RANTES, with two mutations in the cationic site is useful for the preparation of a pharmaceutical composition used in treating multiple sclerosis or other demyelinating diseases. The mutant with single mutations at cationic sites is used for the treatment of HIV infection and/or other allergic or inflammatory diseases. This sequence represents an example of a CC inflammatory diseases. This sequence represents an example of a CC
                                                                                                                                                                                                                              A mutant of the human CC chemokine RANTES with two mutations in the cationic site of the 40's loop is used for treatment of multiple sclerosis and/or demyelinating diseases -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAG78390
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Best Local
                   here the antigen present is the composition is a tumour associated antigon. The use of APC clambdaxins provides an accelerated immune response in a bast following administration of antigen, a more effective temponse to administratification, if exposure to, very small quantities of
                                                                                             infectious pathmy-nic agents (bacteria, virus, etc.,) prior to expected or possible exposure, for treating cancers, melanomas, tung and breast cancers, renal cell carcinomas etc.
                                                                                                                                                                              separately. Synthetic (missage) or naturally occurring chemokines may be used. The polypeptides of the invention are used to induce an immune response by recruiting AFGs to areas of antigen contact. The compositions
                                                                                                                                                                                                                                         This title and antimized at activity. The compositions of the invention can contain one or more antigens (or antigen containing polynucleotides) and may be administered in the same mixture as the APC chemptaxin or
                                                                                                                                                                                                                                                                                                     subject, in the manufacture of a medicament, where the APC-chemotaxin is a chemokine polypeptide or its variant, or a polynucleotide encoding the chemokine polypeptide or its variant. The invention has antitumour,
an antigen (e.g., toxin () pathogen) due to increased autigen uptake
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Use of a composition containing an antigen presenting cell-chemotaxin which is a chemokine polymeptide or its variant or a polymucleotide encoding the protein, for inducing immune response to an antigen in a
                                                                                                                                                                                                                                                                                                                                                                 describes the use of a composition containing an antigen presenting cell (APC) -chamotaxin for inducing an immune response to an untigen in a
                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is that of a human chemokine polypeptide designated hMCP-2, used in the compactions of the invention. The specification

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human: mouse; monocyte chemotactic protein 2; hMCP2, MCP2; mCl0: chimeric chemokine; immune response; cytostatic; antimicrobial; immunostimulant; vaccine; cancer; breast cancer; lung cancer; carcinoma, melanoma; tumour; hyprikine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human monocyte chemotactic protein 2 (MCP2) amino acid sequence
                                                                                              composition containing an antigen-presenting cell chemotaxin (APC-chemotaxin), where the APC-chemotaxin is a chemokine polypeptide of its variant, or a polypnocleoride encoding the chemokine polypeptide of its variant. The APC-chemotaxin has cytostatic antimorphial and immunestimulari activities, and can be used for inducing or enhancing an immune response. The method can be used for inducing or enhancing an immune response. The providing protection from exogenous foreign infectious pathogenic or for providing protection from exogenous foreign infectious pathogenic displaying symptoms of exposure. The method may be used to treat cancers e.g. breast cancers, lung cancer, carcinomas, melanomas, and tumours. The present sequence represents a human monocyte chemotactic protein 2 present sequence represents a human monocyte chemotactic chemokines).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        01-MAR-2002 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                       Inducing an immune response to an antigen to confer non-specific protection while the body is generating the adaptive response, comprises administering a composition containing an antigen-presenting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     12-APR-2001; 2001W0-US12162.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Misc-difference 47
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      rheumatoid arthritis; contraception
                                                                                                                         The present invention concerns the identification of a number of chemokines which can be used to produce derivatives, appulsts and antagonists which are then useful in disease treatment. The chemokines antagonists which are then useful in disease treatment. The chemokines antagonists which are then useful in disease treatment. The chemokines can be used to treat diseases such as these can be used to treat diseases such as autommune diseases, atheroscierosis, osteoporosis, HIV inherition and autommune diseases, atheroscierosis, osteoporosis, HIV inherition and AIRS, psoriasis, inflammatory diseases, hypertension, hasophil-mediated diseases, endotoxaemia, myocardial infarction, acute incharmia and diseases, endotoxaemia, myocardial infarction, acute incharma and rehumatorid arthritis, and can be used to prevent strokes and as remained the coding sequences for the chemokines can be used in gene therapy for the same diseases, as well as in the production of gene therapy for the same diseases, as well as in the production of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             20-JUL-2000.

                                    RESULT 14
                                                                                                                                                                                                                                                                     The invention relates to polynucleutides encoding muting julner his or chuman ectaxin polypeptides. The ectaxin polypucleotides are useful for modulating essimphil chemotraxis, for increasing eximphil chemotractic events, and for improving prognosis with tumours in parious They are also useful for treating inflammation and tumourlegenesis, and for reducing inflammatic near damage caused by ecsimphils, for educing inflammatic reactions, eosimophilic pnounchia and allergic diseases, inflammatory bowel diseases, atopic dematitis, urticatia, vascultis, parasitic infections and eosimophil cardiac diseases. The cotaxin polynucleotides are also useful for modulating histamine release by modulating ectaxin activity or expression during anaphylaxis, curticaria and allergic reactions. They are useful for detecting and monitoring eosimophil mediating conditions, and in anti-cancer gene therapy. The present sequence represents a human monocyte chemicative converter (Murby) frazment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ABB80903

antigen containing polynorlectides) and may be administered in the same mixture as the APC-chemotaxin or separately. Synthetic (minetic) or naturally occurring chemotaxin or separately. Synthetic (minetic) or naturally occurring chemotaxin or separately. Synthetic (minetic) or naturally occurring chemotaxin or separately. Synthetic (minetic) or naturally occurring chemotaxins may be used. The polypeptides of the invention are useful for providing protection from foreign infectious pathogenic agents (bacteria, virus, etc.) prior to expected or possible exposure; for treating cancers, melanomas, thyroid carcinomas, lung and breast cancers, renal cell carcinomas etc. here the antigen present in the composition is a tumour-associated antigen. The use of APC-chemotaxins provides an accelerated immune response in a host following administration of or exposure to very small quantities of au antigen (e.g., toxin or pathogen) due to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is that of a chimeric chemokine polypeptide (hybridkine) derived from bundan chemokine hMGP 2 (AAC78396) and murine chemokine mMDC (AAC78392) used in the compositions of the invention. The specification describes the use of a composition containing an antigen presenting cell (APC)-chemotaxin for inducing an immune response to an antigen presenting cell (APC)-chemotaxin for inducing an immune response to an antigen presenting cell (APC)-chemotaxin for inducing an immune response to an antigen to a subject to manufacture of a subject to 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antigen in a subject, in the manufacture of a medicament, where the APC-chamataxin is a chemakine polypeptide or its variant, or a polypurcleotide encoding the chemokine polypeptide or its variant. The invention has antitumour cytostatic and antimicrobial activity. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAG68358 standard; peptide; 77 AA
                                                                                                                                                                                                                                                         composition containing an antigen-presenting cell chemotaxin (APC-chemotaxin), where the APC-chemotaxin is a chemokine polypeptide, its variant, or a polynucleotide encoding the chemokine polypeptide or its variant. The APC-chemotaxin has cytostatic, antimicrobial and immunostimulant activities, and can be used in vaccine production. The method can be used for inducing or enhancing an immune response. The providing protection from exogenous foreign infectious pathogenic or for providing protection from exogenous foreign infectious pathogenic agents prior to expected or possible exposure, or to induviduals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Chimeric - Mus sp.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI: 2002-049246/06.
                                                                                                                                                                         displaying symptoms of exposure. The method may be used to treat cancers e.u. breast cancer. lung cancer, carcinomas, melanomas, and tumours. The present sequence represents an exemplary chinoric chemokine desimated mmMC/LMCP2. Which is given in an example from the present invention for the design of hybrikines (chimoric chemokines).
                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a method for inducing an immune response to an antigen in a subject. The method comprises administering a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Example 5; Fig 2; 60pp; English.
